

**Items:** Basic building blocks of the system.

**The relationship:**Connections between the elements.

**Information:** As a structure and pattern of relations.

**Energy and power:** Interpreted as aspects of the relations themselves.

**Nothing:**Elements and relations as a whole always form nothing. No new elements and relations arise unless they cancel each other out into nothingness.

**Events and event chains:** Transformations of the relationships between the elements.

**Space and time:** Emergent properties of the relations themselves.

**Possibilities:** Overlay of events.

**Coincidence:** Phenomenon resulting from overlapping independent chains of events.

**Consciousness:** As an overlay in the structure of events that is indistinguishable from chance.

**EventableInitial states:** As an inevitable, emergent consequence of the superposition of all possibilities, there exist such possibilities in which such relations exist that make events (transformations of relations) possible.

**Beginning, present, end:**Every Event chains exist as an interval open in both directions with the limit values of beginning and end and the presence of superposition with other event chains, but also as a point from the point of view of the omniscient superposition of all possible event chains.

**Evolution:** Emergent phenomenon from the inherent diversity and dynamics of relations.

**Omniscience:** As the end point of development in which all possibilities are superimposed.

**Incarnation, Resurrection:**As a necessary emergent consequence of evolution and omniscience.
